

1. Features

- Compatible and extend DMX512 (1990) signal protocol
- High accurate decoding, Decode DMX512 signal (200K-750Kbps) easily
- Parallel control, support 1024 channel
- Auto editing and setting up light address quickly
- RGBW Mode, 256 dimming level

2. Editing address automatically

1. Connect all lights and power on, the rest lights after original light can get address automatically
2. Original light is yellow color and the rest lights are red color once address had been done

Following connected DMX512 lights are RGBW type, each light need 4 address

1. Eg: Original light address is 001-004

2. Eg: Original light address is 006-009

(Initial address is 001) address will be set up once the light is power on

T Connection Cable Diagram

Quantity of lights for 1 T connection cable

Light Type	Number
