# 4 Channel Constant Voltage DMX512 & RDM Decoder

Model No.: D4-S

RDM/DIP switch/Logarithmic dimming
CE RoHS EMC LVD C

Features

● Comply with the DMX512 standard protocols.

● Set DMX decode start address via DIP switch.

● RDM function can realize intercommunication between DMX master and decoder.
   For example, DMX decoder address can be set by DMX master console.

● Green termimal DMX signal input & output.

Technical Parameters

Input and Output

Input and Output	
Input voltage	12-24VDC
Input current	24A
Output voltage	4 x (12-24)VDC
Output current	4CH,6A/CH
Output power	4 x (72-144)W
Output type	Constant voltage

Safety and EMC

Safety and EMC	
EMC standard (EMC)	EN55032:2015, EN61000-3-2:2014, EN61000-3-2:2013, EN55024 :2010/A1:2015
Safety standard(LVD)	EN 61347-1:2015 EN 61347-2-11:2015
Certification	CE,EMC,LVD

Environment

Environment	
Operation temperature	Ta: -30°C ~ +55°C
Case temperature (Max.)	Tc:+85°C
IP rating	IP20

Warranty and Protection

Warranty and Protection	
Warranty	5 years
Protection	Reverse polarity

Weight

Weight	
Net weight	0.241kg
Gross weight	0.268kg

Mechanical Structures and Installations

Wiring Diagram

Note:

1. An DMX signal amplifier is needed if more than 32 decoders are connected, or use overlong signal line, signal amplification should not be more than 5 times continuously.
2. If the recoil effect occurs because of longer signal line or bad line quality, please try to connect 0.25W 90-120Ω terminal resistor at the end of each DMX signal line.

DIP Switch

ON ↑
1 2 3 4 5 6 7 8 9 10

RDM Mode: The DIP switch 1-10 are all OFF.

ON ↑
1 2 3 4 5 6 7 8 9 10

DMX Mode: FUN=OFF (the 10th DIP switch = OFF)
Setting DMX addresses with DIP switch 1-9.

ON ↑
1 2 3 4 5 6 7 8 9 10

Self-testing Mode: FUN=ON (the 10th DIP switch = ON)
Setting self-testing mode with DIP switch 1-9.

RDM Mode

When change DIP switch 1-10 to OFF, the defaulted DMX start decode address become 1.
then DMX start decode address can be set by DMX/RDM console.

DMX Mode

DMX strart decode address value = the total value of (1-9), to get the place value when in "on"position,
otherwise will be 0.
E.g.1: Set start address to 16.

ON ↑
1 2 3 4 5 6 7 8 9 10
001 002 004 008 016 032 064 128 256 FUN

E.g.2: Set start address to 73.

ON ↑
1 2 3 4 5 6 7 8 9 10
001 002 004 008 016 032 064 128 256 FUN

001+008+064=73

E.g.3: Set start address to 170.

ON ↑
1 2 3 4 5 6 7 8 9 10
001 002 004 008 016 032 064 128 256 FUN

002+008+032+128=170

Self-testing Mode

1 2 3 4 5 6 7 8 9 10

Static Red — Static Green — Static Blue — Static Yellow — Static Cyan — Static Purple — Static White — 6 Colors Jumping — 6 Colors Smooth

1. For dynamic effects (DIP Switch 8,9 = on) : DIP switch 1-7 is used to get 7 speed levels. (7=on, the fastest level)
2. When several DIP switches are on, subjected to the highest switch value.
   As the figure above shows, the effect will be 6 colors smooth at 7 speed level.

DMX Dimming

Each D4-S DMX decoder occupy 4 DMX address when connecting the DMX console.
For example, the defaulted start address is 1, their corresponding relationship in the form:

DMX Console	DMX Decoder Output
CH1 0-255	CH1 PWM 0-100% (LED R)
CH2 0-255	CH2 PWM 0-100% (LED G)
CH3 0-255	CH3 PWM 0-100% (LED B)
CH4 0-255	CH4 PWM 0-100% (LED W)

Dimming curve

Gamma=1.6
